

13. Let  $f(x)$  be a polynomial of degree four having extreme values at  $x = 1$  and  $x = 2$ . If

$$\lim_{x \rightarrow 0} \left[ 1 + \frac{f(x)}{x^2} \right] = 3 \text{ Then } f(2) \text{ is equal to:}$$

(1)  $-8$

(2)  $-4$

(3)  $0$

(4)  $4$

**Answer:**

Let the 4<sup>th</sup> degree polynomial be

$$f(x) = ax^4 + bx^3 + cx^2 + dx + k$$

$$\text{Given } \lim_{x \rightarrow 0} \left[ 1 + \frac{f(x)}{x^2} \right] = 3$$

$$\text{or } \lim_{x \rightarrow 0} \left( 1 + \frac{ax^4 + bx^3 + cx^2 + dx + k}{x^2} \right) = 3$$

$$\text{or } \lim_{x \rightarrow 0} \left( \frac{ax^4 + bx^3 + cx^2 + dx + k}{x^2} \right) = 2$$

$$\text{or } c = 2, d = 0, k = 0$$

$$\text{hence } f(x) = 2x^2 + bx^3 + ax^4$$

$$\text{Differentiating } f'(x) = 4x + 3bx^2 + 4ax^3$$

$$f'(1) = 4 + 3b + 4a = 0 \rightarrow (1)$$

$$f'(2) = 8 + 12b + 32a = 0$$

$$\text{or } 2 + 3b + 8a = 0 \rightarrow (2)$$

$$\text{from (1) and (2) we get } 2 - 4a - 4 + 8a = 0$$

$$\text{or } 4a = 2, a = \frac{1}{2} \text{ also } 4 + 3b + 2 = 0, b = -2$$

$$\text{Hence } f(x) = 2x^2 - 2x^3 + \frac{1}{2}x^4 \text{ or } f(2) = 8 - 16 + 8 = 0$$

**Correct option is (3) 0**
